

DISTRIBUTED GENERATION SERVICE

Available: Electric service is available under this schedule at points on the District's distribution facilities located within its service area.

Applicable: To all qualifying customers who contract for service supplied at one point of delivery where part or all the electrical requirements of the customer can be supplied from a source or sources other than the District, and where such sources are connected for parallel operation of the customer's system with the system of the District. Customer sources may include, but are not limited to, wind generators, water wheels, solar conversion, and geothermal devices. This schedule is not applicable where distributed generation facilities exceed 25 kW.

Character of Service: Alternating current, 60 cycles, at the voltage and phase of the District's established secondary distribution system most available to the service location.

Rates:

- (a) For capacity and energy supplied by District to customer, the applicable rate shall apply.
- (b) For energy supplied by customer to District the avoided cost rate shall be: \$.0266 per kWh for all kWh's throughout the year.

Billing: The number of kWh's sold to the District by customer shall be measured by the District and the amount shall be credited against the amount of energy sold to the customer by the District (net metered). Should customer's generation exceed the amount sold to them by the District, the "CTC" rate applies for calculating customer's monthly credit available for use on subsequent bills.

District Provided Equipment: Two non-reversing kWh meters, or one dual-register meter, shall be required to determine energy inflow and outflow.

Customer Responsibilities: The District requires an Application for Approval to Construct a Distributed Generation Interconnection specifying legal, safety, technical, and operating aspects of the closed transition operation, and a separate Interconnection and Service Agreement for the interconnection to the District's distribution system. The customer shall pay for all costs associated with this class of service over and above that which would normally be supplied to a like service without generation.

Effective: With bills rendered
after February 25, 2021

Approved: Board of Directors 02/10/2021
